

Overview

Problem statement:

“Your team is tasked with reimagining the way a new member joins UFCU, imagine a **better, faster, and more intuitive way** to join UFCU and easily onboard one or more of its products.”

Total: 100 points

Scale: 1–5 for each category, then multiply as indicated.

Scorecard

Category	Possible points	Rating (1-5)	Score (rating x weight factor)
A. Member onboarding & product fit	25		rating × 5 = ____
B. Speed & friction reduction	20		rating × 4 = ____
C. UX intuitiveness & creativity	20		rating × 4 = ____
D. Technical execution & feasibility	15		rating × 3 = ____
E. Compliance, trust & risk awareness	10		rating × 2 = ____
F. Pitch & communication	10		rating × 2 = ____
Total	100		____

Scoring Criteria

For each category, assign the team the score (1-5) that you feel best represents their solution.

A. Member onboarding & product fit (25 points | ×5)

How well does the solution help people join the credit union and end up with the right mix of products?

1. Onboarding journey unclear; product selection is an afterthought or confusing.
2. Basic join-flow present; product choices are generic or disconnected from member needs.
3. Clear sign-up plus simple way to choose products; some attempt at matching needs.
4. Well-structured onboarding that captures key info and guides members to suitable products; flows feel tailored.
5. Excellent understanding of different member segments and needs; the journey naturally leads to an appropriate product bundle with clear value explanation.

Score = rating × 5

B. Speed & Friction Reduction (20 points | ×4)

How much faster and smoother is this versus a typical credit union onboarding / product signup?

1. Flow feels slow or cumbersome; many unnecessary steps; little automation.
2. Some improvement in speed; a few redundancies removed, but there is still noticeable friction.
3. Reasonably streamlined; clear steps, some smart defaults; likely faster than traditional flows.
4. Very efficient; minimal data reentry, intelligent branching, good use of pre-fill or reuse of information.
5. Dramatically faster end-to-end, with clear time-savers (e.g., progressive profiling, single flow for multiple products, reuse of verified data).

Score = rating × 4

C. UX & intuitiveness (20 points | ×4)

Focus: Is it **easy** for a prospective member to understand what to do, what they're getting, and what's next?

1. Confusing navigation; unclear labels; hard to understand products or steps.
2. Basic usability; users can get through but may feel uncertain or overwhelmed.
3. Generally clear and intuitive; sensible layout and language; some rough edges.
4. Very intuitive design; clear hierarchy, plain-language explanations, good error messages, and state feedback.
5. Exceptionally intuitive and inclusive; anticipates user questions; builds confidence with strong microcopy, visuals, and guidance.

Score = rating × 4

D. Technical execution & feasibility (15 points | ×3)

Focus: For the time given, how realistic and technically sound is the approach for a credit union environment?

1. Mostly conceptual; minimal working prototype or unrealistic assumptions about systems.
2. Some working pieces; integrations or data handling only loosely thought through.
3. Solid MVP; key flows implemented or convincingly mocked; plausible architecture.
4. Robust prototype for hackathon scope; thoughtful handling of data, systems, and constraints.
5. Very strong implementation; clear path to integration with real systems (core banking, CRM, KYC vendors) and scalability.

Score = rating × 3

E. Compliance, trust & risk awareness (10 points | ×2)

Focus: Does the solution feel trustworthy and aware of credit union compliance realities (KYC, AML, disclosures, data privacy)?

1. Ignores compliance or risk; asks for sensitive data in risky ways.
2. Light mention of security or privacy; not clearly embedded in the flow.

- $$\text{Score} = \text{rating} \times 2$$

Focus: How clearly does the team explain the problem, their solution, and the member journey?

- $$\text{Score} = \text{rating} \times 2$$
