

Hackathon Challenge: Reimagine UFCU's New Member Onboarding Experience

You and your team will reimagine a new member onboarding experience that allows them to seamlessly open a UFCU account and utilize one or more of its products. We encourage you to be innovative, think outside of the box, and push the traditional banking experience.

Your challenge:

Create a prototype that helps a new member join UFCU quickly and securely. You choose *what to build*, *how deep to go*, and *what technologies or concepts to use*.

Teams may explore but are not limited to areas such as:

- Establishing identity in a simple, member centric, UFCU way
- Ensuring the credit union obtains required information to safely open the account
- Applying for Everyday Banking, Mortgage Lending, Consumer Lending or Business Banking products.
- Enhancing existing and future products or banking features that support the members banking needs

What to Deliver

By the deadline, your team should be able to show:

- A code-based **prototype** solution that highlights your workflow for onboarding a new member
- A brief explanation of **how your solution improves the onboarding experience**
- How your approach ensures the credit union can trust the new member's identity
- How the solution gets a user from interest → membership-ready
- How trust and identity confidence are established without breaking the member experience

Guidelines

A member is any individual who established a relationship with UFCU via one or more of the following products:

- Deposit Account (Savings, Checking, Certificate, etc)
- Loan (Credit Card, Auto, Line of Credit, etc)
- Mortgage

What does 'good' look like?

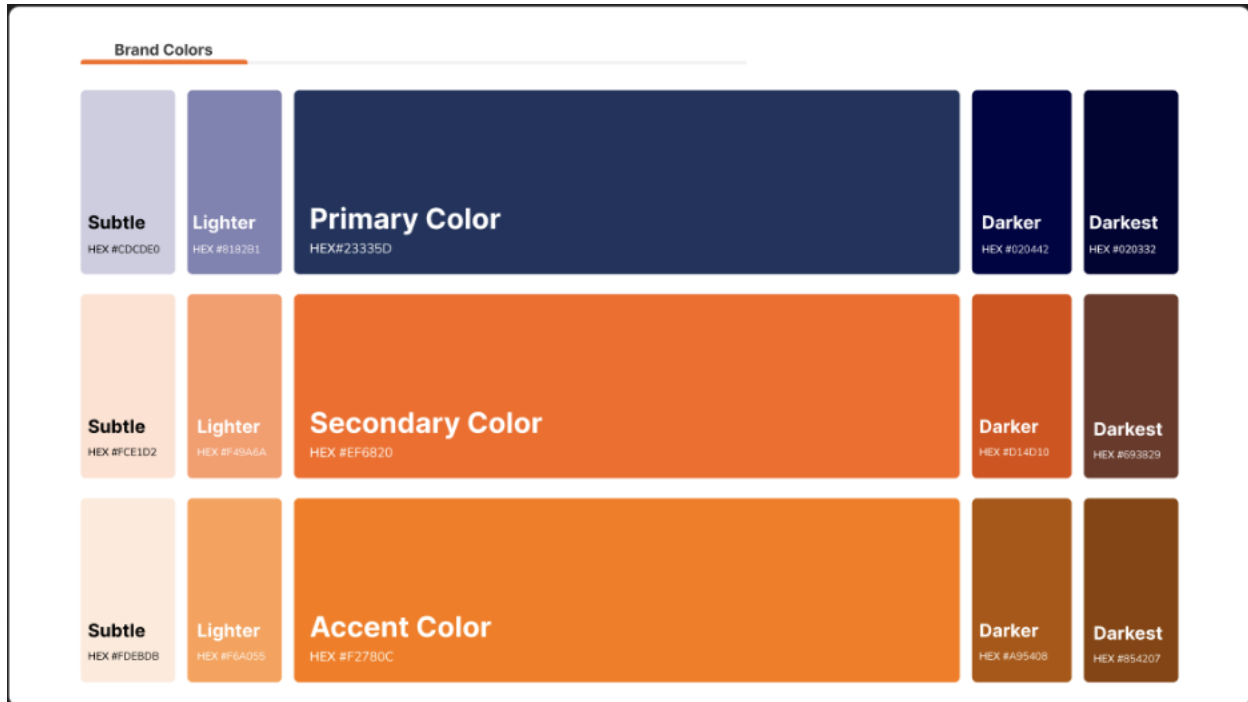

- Simple
- Accessible to all individuals, including generations (boomer, gen x, millennial, gen z, alpha)

You are **not** required to build:

- Real identity verification systems
- Real banking integrations
- Full production solutions
- Don't over-engineer. A great concept prototype beats a half-finished system.

Mock, simulate, or invent what you need.

Brand Guidelines:

Research:

As you begin ideating on the prototype that helps a new member join UFCU, explore [The UFCU Way](#). Watch this video (insert hyperlink) to better understand the current account opening process.

Thought Provokers:

- What would you want from the account opening experience?
- What banking features/products are you wanting before opening an account?
- What requirements do you consider before opening an account?
- What deters you from opening an account?
- What is missing from the current process?

UFCU Product and account information:

Personal & Business

- Checking
- Savings
- Credit Cards
- Loans
- Investments

DevelopU Hackathon: Participant Expectations

Deliverables

Each team is expected to provide the following:

1. Design Prototype

Create a user experience and interface prototype for your solution.

- Recommended tools:
 - Figma (free for students)
 - Google Stitch
 - Any equivalent design/prototyping tool

2. Working Web Application

- Develop a functional web application that demonstrates your solution.
- The application must be able to run locally on a laptop.
- There are no restrictions on programming languages, frameworks, or technology stacks.

3. Final Presentation

- Deliver a live demonstration of your solution.
- Clearly explain:
 - The problem you are solving
 - Your approach and design decisions
 - Key features and functionality
 - Future enhancements and opportunities
- A PowerPoint or slide deck is optional

What We Will Provide

To help you succeed, we will provide:

- Wi-Fi access
- Mentors available throughout the event for guidance and feedback
- Breakfast, lunch, snacks, and refreshments

Use of Third-Party Tools and AI

Participants are welcome to use any external tools, services, or AI assistants that support their work, including:

- GitHub Copilot
- Claude
- ChatGPT
- Google Gemini
- Any other third-party tools or services you find helpful
 - The focus is on creativity, innovation, problem-solving, and demonstrating a working solution, not limiting the tools you use

Success Tips

- Start with the problem, not technology.
- Build an MVP first and focus on core functionality.
- Keep your demo simple, clear, and reliable.
- Be prepared to explain your design choices and technical approach.
- Have fun, collaborate, and learn from mentors and fellow participants!
